TITLE: A method for the putting up of programs for calculations of the engineer

PERIODICAL: Referativnyy zhurnal, Matematika, no. 8, 1962, 65, abstract 8V383. ("Issled. po teorii sooruzh.", no. 10, M., Gosstroyizdat, 1961, 279-286)

TEXT: A method basing on the use of simple notations is proposed for the putting-up of programs for the calculations on electric computers with keys. It is pointed to the fact that such a program can easily be translated into the language of electronic computers, An example for the putting up of a program is given.

TEXT:

A draft program takes into account the limitations of the operating memory storage and the necessity of scaling for electronic fixed decimal-point computers. The construction of draft programs does not require special knowledge in the field of programming. The translation of the draft program into machine code in terms of addresses and the construction of the working program is carried out by a mathematician-programmer according to the rules set forth in the article. A draft (and its corresponding addressed) program for the solution of systems of linear equations, as well as a typical program for the

static analysis of indeterminate rod systems are considered. According to the method set forth, programs are elaborated for the analysis of various types of plates, shells, gaging systems and even solutions of engineering problems for use on the electronic computer "Kiyev". Programs for the machine M-20 are also set up.

Programming in the design of spatial structures (Programirovaniye raschetâ prostranstvennykh konstruktsiy), Kiev, Gosstroyizdat USSR, 1963, 225 p. illus., biblio. 4,000 copies printed. (At head of title: Zonal'nyy nauchno-issledovatel'skiy i proyektnyy institut tipovogo i eksperimental'nogo projektirovaniya zhilykh i obshchestvennykh zdaniy Goskomiteta po grazhdanskomu stroitel'stvu i arkhitekture pri Gosstroye SSSR).

TOPIC TAGS: civil engineering, spatial structure, construction, electronic computer, ALGOL-60, algorithm, linear equation, computer programming, structural mechanics

PURPOSE AND COVERAGE: The book gives numerical methods of calculating buildings using modern digital machines (electric and electronic). Great attention is given to analysis of the algorithmic languages, problems of creating machine algorithms, and the technology of programming. Application of economic organization of the memory of electronic computers based on a study of the features of the matrix structure that are characteristic for problems of structural mechanics and applied elasticity theory are proposed. The algorithmic language ALGOL-60 is used to develop a number of programs for systems of linear equations of certain structures and the

Card 1/3

AM4035369

general programs of calculating spatial systems in a nonlinear position are given. The book is intended for engineers, designers, researchers, and students in civil engineering. The general part of the book relating to problems of programming, solution of linear equations of structural mechanics, etc. can be used by specialists in ship building, aviation and machine building industries.

Title : Natural Frequency of Undamped Flexural Vibrations of Piezo-electric Rods.

Orig Pub : Ceskosl. casop. fys., 1957, 7, No 4, 369-377

Abstract : To determine the natural frequencies of the undamped flexural oscillations, an equation of the following form is solved:

$$\rho \frac{\partial^2 v}{\partial t^2} - \rho \frac{\partial^4 v}{\partial x^2 \partial t^2} - C \frac{\partial^2 v}{\partial x^2} + E \frac{\partial^4 v}{\partial x^4} = 0$$

where  $I_0(x)$  is the moment of inertia,  $\rho$  is the density of the material,  $E(G)$  is the value of the modulus of elasticity in the direction of the length of the rod (of height  $b$ ). The computation is performed for a silicon rod of specified parameters.

**ABSTRACT:** New concepts are introduced which characterise shear  
motion. The equations of motion are derived for systems con-  
sisting of material points and for a body with a continu-  
ous distribution of matter. The terms introduced here  
for the shear motion show a formal similarity to the terms  
relating to rotary movement but are not derived from  
those. The justification for introducing the given  
new terms was proved during the study of shear oscillations  
relative to a plane. The shear oscillations relative to a  
surface can be described by these new terms only as long as  
they occur sufficiently near/on if the shear surface can be  
substituted by a plane. There are 1 figure and 1 Czech  
reference.

Influence of ....

and a function  $\xi(x)$  describing it are not sufficiently accurate. Therefore, the values of the parameters of the equivalent electric circuit for various oscillation modes in piezoelectric rods are not accurate and it is necessary to introduce a correction factor by taking into account the nonhomogeneity of the exciting field. At any point of the axis  $O_1$  (see Fig. 1), the overall field strength of the exciting field is:

$$E_a(x, \frac{b}{2}, \frac{\bar{a}}{2}) = \frac{V_0}{\pi \bar{a}} \left\{ \arctan \frac{2bx}{\bar{a}\sqrt{4x^2 + \bar{a}^2 + b^2}} + \arctan \frac{2b(l-x)}{\bar{a}\sqrt{4(l-x)^2 + \bar{a}^2 + b^2}} \right\} \quad (3).$$

By using this formula it is shown that the corrected values of the equivalent parameters of the circuit are given by:

$$\left. \begin{aligned} *L_{1a}(\gamma) &= \frac{\rho \bar{a}^2 l}{2 \epsilon_{31}^2 ab [\Phi_{1a}(\gamma)]^2} \\ *C_{1a}(\gamma) &= \frac{2 \epsilon_{31}^2 s_{11} ab l [\Phi_{1a}(\gamma)]^2}{\gamma^2 \sqrt{1 - \bar{a}^2}} \\ *R_{1a}(\gamma) &= \frac{\bar{a}^2 (s_{11} l^2 + \gamma^2 s_{11}^2 ab)}{2 \epsilon_{31}^2 s_{11} \bar{a}^2 b^2 l [\Phi_{1a}(\gamma)]^2} \end{aligned} \right\} \quad (12)$$

ward 2/3

Influence of ....

Z/508/60/000/000/018/018

AUTHOR: Benes, F.; Soska, F.

TITLE: Influence of a magnetic field on a vibrating piezoelectric medium...

SOURCE: Chekhoslovatskiy fizicheskiy zhurnal, v. 14, no. 3, 1964, 189-195

TOPIC TAGS: magnetic field, harmonic oscillator, dipole, piezoelectric crystal, dipole

ABSTRACT: The idea of influencing the frequency of a piezoelectric crystal by a stationary electric field for the purpose of standardization was first discussed by Vilbig (Lehrbuch der Hochfrequenztechnik II, Leipzig, 109, 1958). If an attempt is made to observe a vibrating piezoelectric medium as a system of dipoles (harmonic oscillators) during a qualitative description of this effect (and only in first approximation), it is found that an electric field polarizes this system and deflects the trajectory of the oscillator somewhat from the original direction but neither bends nor changes the directional force of the oscillator. However, since the resonance frequency of the oscillator changes (obviously due to the influence of the interaction between the dipoles of the system), the directional force  $k$ , and with it the frequency  $\omega_0$ , must also change according to the equation

Cord 1/2

ACCESSION NR: AP4026363

$$\omega_0^2 = \frac{k}{m}$$

The influence of a magnetic field on a system of harmonic oscillators is manifested in another way. Its influence causes not only another type of interaction between the oscillators (and thus a possible change in the material constants) but also a change in the frequency of an oscillator which has been produced by the curvature of its trajectory. The author studies the influence of a magnetic field on the frequency of piezoelectric crystals in the above sense. Orig. art. has: 3 figures and 20 equations.

581. *Protective effect of haematopoietic tissue in the irradiation syndrome. IV. Effectiveness of some fractions of spleen homogenate* Ochranný vliv krvetvorné tkáně v nemoci z ozáření. IV. Účinnost některých frakcí sleziného homogenátu. SOŠKA J. and DRÁŠIL V. Biofys. Úst. ČSAV, Brno Čsl. Biol. 1958, 7/1 (23-29) Graphs 4 Tables 2

The nuclear fraction of spleen homogenate with living cells caused some reduction in mortality and had a favourable effect on the course of weight changes. Nuclei were less effective than whole homogenate; however, mortality was affected at a different time and regeneration of the spleen was not accelerated by the nuclear fraction. The cytoplasmic fraction had virtually no effect. Spleen extracts to some extent accelerated regeneration of haematopoiesis and a return to normal weight, but considerably less than the whole homogenate. At the same time mouse spleen extracts had a mildly toxic effect. The homogenate is fully effective only if cells are present, but the above experiments do not exclude the possibility of secondary effect by stimulant substances produced by the cells.

If irradiated mice are injected with a suspension of spleen or bone marrow cells, regeneration of haematopoiesis is accelerated and survival is increased. In recent years evidence has been accumulating that the basis of this protective effect is transplantation of the injected haematopoietic cells, which proliferate in the irradiated organism. On using non-inbred animals, it was observed that the degree of protection was small and that death was only postponed. Since the authors assumed that this was due to an immunity reaction, a comparison was made of the effectiveness of spleen cells from young mice, adult mice and from the animals' own spleens, taken before irradiation. The results were evaluated according to survival, body weight and the effect on haematopoiesis and DNA synthesis. The material from young animals had a temporary protective effect, that from adult mice increased mortality, although regeneration of haematopoiesis and DNA synthesis were also accelerated, while the material from the animals' own spleens had a favourable effect in every respect. Since regeneration of haematopoiesis was also accelerated on using foreign cells, a further experiment was carried out, in which an attempt was made to identify them in regenerating spleen: In the first part of the experiment, spleen cells from splenectomized donors were injected into irradiated intermediate hosts. A week later these were killed and a suspension prepared from their spleens, part of which was reinjected into the original just irradiated donor and part into another irradiated mouse. A protective effect was observed only in the donors; the same suspension had no protective effect on other mice. The results indicate that the spleens of the intermediate hosts contained proliferating donor haematopoietic cells.

TITLE: Regulation of the synthesis of nucleic acids in thermobacterium acidophilum  
[This paper was presented during Biophysical Days, Brno, 12 June 1964.]

SOURCE: Ceskoslovenska fysiologie, v. 14, no. 4, 1965, 275

TOPIC TAGS: biosynthesis, RNA, DNA, biochemistry, nucleic acid, bacteria, amino acid, glutamic acid, radioisotope, tracer study

ABSTRACT: Effect of deprivation of glutamic acid, tyrosine and leucine on RNA and DNA formation with or without chloramphenicol in the medium was studied with leucine-C<sup>14</sup>, orotic acid-C<sup>14</sup> and thymidine-H<sup>3</sup>. Conclusion was that the biosynthetic control mechanisms for DNA and RNA are relatively independent of each other. [JPRS]

TITLE: Boxless-Stack Machine Molding (Bezopochno-stopochnaya mashinnaya formovka)

PERIODICAL: Liteynoye proizvodstvo, 1958, Nr 10, p 30 (USSR)

ABSTRACT: Boxless-stack machine molding is described and is recommended for small and medium-sized foundries, to save space. The advantages consist in a high annual yield per square m of molding space, a high productivity of the machine, noiseless operation, maximum utilization of the equipment (due to double-sided extrusion), a minimum consumption of molding mixture and metal, and the lack of need for a large number of boxes. There are 2 diagrams.

Title: A Method of Compilation of Navigation Charts of Flow and Tides of the Seas on the Basis of the Harmonic Constants of the Tide-Ebb Flows

Original

Periodical: Tr. Gos. okeanogr. in-ta, 1955, No 30, 242-272

Abstract: The initial data for the proposed method of plotting the charts are harmonic constants of the tide-ebb flows, which make it possible to take into account all the basic factors affecting the variations in the flow. The method of compiling the charts is considered separately for regions having a mixed type of tide and for regions characterized by a predominance of the half-daily type of tide. Methods of calculations are given for the 2 above cases. In principle, the schemes reduce to the performance of

TITLE: Dynamic and Thermal Interaction of the Atmosphere and Hydrosphere (Dinamicheskoye i teplovoye vzaimodeystviye atmo- i gidrosfery) Transactions of the Scientific Conference in Leningrad (Nauchnaya konferentsiya v Leningrade)

PERIODICAL: Vestnik Akademii nauk SSSR, 1958, Nr 7, pp. 128 - 129 (USSR)

ABSTRACT: This conference was held March 26<sup>th</sup> - March 29<sup>th</sup> at the invitation of the Committee of Oceanography attached to the Presidium of the AS USSR and of the Hydrometeorological Institute (Okeanograficheskaya Komissiya pri Prezidiume Akademii nauk SSSR i Gidrometeorologicheskiiy institut). It dealt with the problem of dynamic and thermal interaction of the atmosphere and hydrosphere in the northern part of the Atlantic Ocean (Atlanticheskiiy okean); and with the evaluation of the results of expedition work obtained so far as well as with a precise explanation of the research work to be carried out in future. These problems were included in the program of the International Geophysical Year. The following reports were heard:

Card 1/4

1) A.A.Girs on long term variations of the atmospheric circulation

Dynamic and Thermal Interaction of the Atmosphere and Hydrosphere. Transactions of the Scientific Conference in Leningrad 307/30-58-7-38/49

of the northern hemisphere.

2) I.M.Soskin on fluctuations of the activity of the sun as a basis of ~~extra~~ long-term forecasts of hydrological conditions of the ocean.

3) D.A.Drogaytsev on the long-term variations in the transmission of heat across the meridian in the atmosphere as basis for forecasts of water temperature on the meridian of Kola (Kol'skiy meridian).

4) K.N.Fedorov on the correlation between variations of the general circulation in the ocean and in the atmosphere in the North Atlantic.

5) A.I.Sorkina on the method of designing wind zone charts of the seas and oceans.

6) M.A.Valerianova on attempts of classification of the pressure fields above the North Atlantic for the purpose of computation of the currents and of the ice drift.

The evidence provided by the investigation of the current system in the North Atlantic are not sufficient for the solution of many problems of hydrodynamics. They are not far enough advanced for a practical utilization. According to the opinion of the

Card 2/4

Dynamic and Thermal Interaction of the Atmosphere and Hydrosphere. Transactions of the Scientific Conference in Leningrad SOV/ 30-58-7-38/49

institutes; thus the results obtained are not completely comparable. As a conclusion informations were given on the progress and the plan of operation of the work of the interdepartmental expedition into the Atlantic Ocean and the lakes of Norway and Greenland (Mezhdudomstvennaya ekspeditsiya Atlanticheskogo okeana, Norvezhskogo i Grenlandskogo morey). The Member, Academy of Sciences, USSR, V.V. Shuleykin reported on research work carried out in 1957 in the course of a voyage on the ship "Sedov" in the Atlantic Ocean.
